

New Transport Design by (your name)

Design brief Travelling around Cornwall on its winding country roads can sometimes be difficult whilst also making your journey take far longer than you might expect. Your task is to design a new mode of transportation to make your journey quicker and more entertaining. The way your mode of transport moves is up to you.

Technical diagram Below you will find a technical diagram for a car. Your mode of transport will also need a technical diagram labelled like this one with all of your new features. You do not necessarily need to draw 3 pictures just as long as you have a labelled technical diagram.

Additional information

At the bottom of your diagram write a small paragraph to explain:

- 1) How your vehicle is powered
- 2) How many people can travel in it
- 3) How have you considered environmental concerns – fuel, materials used etc.
- 4) How any new features work
